Education

Northeastern University, Boston – MS in Computer Software Engineering | GPA: 3.7/4.0 Expected Dec 2026

Courses: Data Structures & Algorithms, Cloud Computing, Software Engineering, Advanced Web Architecture

Certifications: AWS Solutions Architect - Professional, AWS Certified Developer - Associate

Experience

Software Engineer, Dassault Systemes – Boston, MA June 2025 – Jan 2026

- Cut SQL latency 70% by adding a Redis caching layer with Hibernate under high-concurrency load.
- Architected service-oriented systems using TypeScript, Node.js and NestJS by implementing dependency injection, modular service layers, and scalable REST APIs for enterprise workflows.
- Achieved 99% coverage by practicing TDD and unit testing with Jasmine and JUnit in Jenkins CI/CD pipelines.
- Enabled SaaS integrations by building third-party API adapters with OAuth2 tokens and webhooks for real-time data synchronization on the 3DEXPERIENCE platform serving 8M+ users.
- Accelerated data delivery 25% by building responsive HTML/CSS React dashboards with WebSockets and GraphQL for a virtual companion module used by 3,000 clients.

Software Engineer, London Stock Exchange Group – Bangalore, India July 2022 – Aug 2024

- Processed 1.4B daily financial records by architecting high-availability AWS microservices.
- Boosted transaction throughput 200% by delivering scalable Spring Boot microservices in two-week Scrum sprints for 400K+ users.
- Boosted data retrieval speed 90% by architecting Kafka-Elasticsearch data synchronization pipelines for 500+ analysts, accelerating real-time market analysis 40%.
- Reduced recurring incidents 75% by applying SRE best practices: centralized logging, alerting, and blameless post-mortems across custom monitoring dashboards.
- Resolved 20+ production issues by prioritizing work on Kanban boards and automating Docker/Kubernetes deployments with Root Cause Analysis.

Projects

GoonedIn goonedin.com

- Resolved the issue of fragmented job searching by developing an automated aggregation engine using FastAPI and Playwright to pull listings from multiple sources and apply AI-driven match scoring with DeepSeek
- Optimized system efficiency and reduced API overhead by implementing a global PostgreSQL caching strategy and a sequential queuing system for structured job analysis
- Architected a real-time dashboard to provide instantaneous job updates for users by implementing a WebSocket communication layer with Next.js (JavaScript) and Zustand for responsive state management

NEU Personalized AI Academic Advisor GitHub

- Simplified academic planning for students by building a vector similarity search engine and React UI to extract information from 500+ unstructured academic PDFs and HTML documents
- Increased recommendation accuracy by achieving a 95% relevance score through the implementation of a semantic matching algorithm using Python, Node.js, LangChain, and Pinecone

Skills

Language: Java, Python, TypeScript, SQL, JavaScript

Framework: Spring Boot, React, Node.js, FastAPI, Hibernate, JPA, Angular, Next.js, RxJS, LangChain

Infrastructure: AWS, Docker, Kubernetes, Terraform, Jenkins CI/CD

Database: PostgreSQL, NoSQL (MongoDB, Cassandra), Redis (Caching), Elasticsearch, Kafka

Tools: REST APIs, GraphQL, WebSockets, Git, Maven, JUnit, Mockito, API Design
